Summary

Adrian is a results-driven IT professional with a Bachelor's degree in System Information, specializing in data analysis to generate actionable insights. With over three years of experience as an IT Developer and System Implementation in the port industry, he has a proven track record of developing robust solutions and fostering strong professional relationships. **Adrian** is now seeking to apply his expertise in IT development or Business Analyst to new opportunities, where he can further leverage his analytical skills and technical proficiency.

Experience

PT. Integrasi Logistik Cipta Solusi (Pelindo Solusi Digital) **(Jakarta, Indonesia)**

System Implementation (Feb 2023 – 2025)

- Implement all site procedures and ensure the configuration of applications according to the task list.
- End-user training on software (Individual and Group).
- Understanding Customer problems and giving them proper support with resolution.
- Provide training related to the Port Business Process, Ship Service Flow, and Phinnisi Website & Application to those who have just joined the VASA and Phinnisi Project.
- Provide socialization & training to Branches (actors involved in ship services) and Shipping Agents.
- Analysis and standardise marine service system and procedure in all branches of Pelabuhan Indonesia (Pelindo)
- Enhance the room of improvement and solution from numbers of gap through change management and maturity data.
- Managed daily documentation.
- Add all client master data into the database.

IT Developer (Feb 2022 – Feb 2023)

(Feb 2025 – Present)

- Collaborate with full stack developers to ensure smooth data flow between the server and the client.
- Create API integration allow the front-end to communicate with the server and databases.
- Create the logic that powers applications. This includes writing code that handles requests from users, processes data, and sends back the correct response.
- Design and interact with databases. This involves creating the database schema, writing queries, and optimizing the database for efficiency. Use relational databases like Oracle, PostgreSQL.
- Integrate the application with third-party APIs or services. For instance, they might integrate surrounding port system.
- Development involves solving complex problems related to data, performance, or logic that support the features and functionality of the software.
- Writing the server-side logic to handle requests from the front-end, process the data, return the results in the proper format (usually JSON or XML).

PT. Sinar Mas Land **(Jakarta, Indonesia)**

IT Developer (Feb 2020 – Feb 2021)

- Development of web applications or websites using various technologies, including HTML, PHP, JavaScript, jQuery, and CSS.
- Allows a website or app to fetch, display, and update news articles dynamically from an external API or database.
- JSON integration in the back-end allows efficient data storage, processing, and communication across different systems.
- Design and interact with databases. This involves creating the database schema, writing queries, and optimizing the database for efficiency. Use relational databases like MySQL.
- Writing the server-side logic to handle requests from the front-end, process the data, return the results in the proper format (usually JSON or XML).
- Development involves solving complex problems related to data, performance, or logic that support the features and functionality of the software.

PT. Pro Health-Int **(Jakarta, Indonesia)**

Data Management (Aug 2019 – Sep 2019)

- Data analysis involves examining, processing, and interpreting data to extract meaningful insights that support decision-making.
- Data management involves organizing, storing, securing, and maintaining data throughout its lifecycle.
- Data reporting involves summarizing and presenting data in a structured format to support decision-making.
- Risk management data involves identifying, analyzing, and mitigating risks using data-driven insights.

Education

Bina Nusantara University **(Jakarta, Indonesia)**

Bachelor of Information Systems (Nov 2017 – Sep 2021)

- GPA 3.03 out of 4.00

Core Competencies

Interpersonal Skills

- Public Speaking
- Time Management
- Critical Thinking
- Risk analysis
- Communication
- Team Work
- Detail Oriented

Software Skills

- Microsoft
- Claude AI
- Axure UI/UX
- UAT Testing
- Oracle Query
- SoapUI API Testing
- Postman API Platform
- DBeaver

Languages

- Bahasa Indonesia (Native)
- English (Good)
